Forecast for Tuesday 23 Feb 2021

Weather: Cloud soon thickening overnight to bring outbreaks of rain, with snow above 600m. This light at first but becoming heavier by the end of the night. A very poor day to come with prolonged, heavy rain for most areas, with still some snow above 800m and summit blizzards but turning to rain at all levels during the morning. Rain will be heavy and prolonged for much of the day, with a further thaw of lying snow and this will lead to very soggy conditions with flooding in places and very fast flowing water courses. The far northeast around Bennachie should see much less rain than elsewhere.

Chance of cloud free mountain/hill tops above 800m: Less than 10% during the day, with only a few brief clearances in the most sheltered north.

Visibility: Becoming generally poor or very poor at height with extensive cloud above 500 or 600m, with bases down to 400m in parts of the south. Also poor at times beneath cloud in rain. Almost nil visibility at height in early snow and blizzards

Met Office Aberdeen Meteorologist's View

Very windy and gusty, with marked mobility difficulty and risk of being blown over. A significant chill over the tops, severe early in the day, but mild on lower slopes. Becoming very soggy with flooding in places and fast flowing water courses. Snow on the tops at first will bring additional navigational issues and risk of disorientation.

Forecast for Wednesday 24 Feb 2021

Weather: Some uncertainty, but worst of the rain is expected to clear later in the night. Then a cloudy start with patchy, mainly light rain, but gradually becoming drier and brighter through the morning. Some sunny spells in afternoon but also a few showers turning to snow above 900m . Residual flooding causing some access problems

Maximum wind: South turning southwest 30-35 gust 45mph, but 50 gust 70mph over the tops well into the morning.

Chance of cloud free mountain/hill tops above 800m: Almost nil overnight, but 30% by daybreak, 70% by afternoon.

Visibility: Poor beneath cloud overnight and very poor at height with extensive cloud down to 400 or 500m, but becoming more broken and lifting to 700m at times later in night. Visibility beneath cloud improving mainly good after daybreak with cloud breaking and lifting further through the morning, leaving occasional broken cloud above 600-800m.

Temperature: **Glens:** Plus 9 or 10C, but falling to plus 5C later
At 800m: Plus 6C falling to plus 3 Celsius in the afternoon
Freezing level: Above summits falling to 1000m in the afternoon
